This paper is appendix to earlier paper named “**Carbon Based Gases in Our Atmosphere**” Accepted on 09 Nov., 2025, Published in Volume 11 ~ Issue 11 (November 2025) pp: 32-34 [www.questjournas.org](http://www.questjournas.org)

This paper presents additional arguments in favour of appeal No.3, made in “**Carbon Based Gases in Our Atmosphere**” & Supporting paper dated 17 November, 2025.

Which together reads as below-

“All the man- or machine-made dams larger than one square kilometre, created to hold river waters must be permanently opened for free flow of water, so that marine life can regenerate itself in rivers & thereby rivers are cleaned by natural process. Hence, Let the waters of global rivers decide their course on their own”

Additional arguments-

Waters, Air, Clouds & Sand are like hands of the Earth. They do act as per will of the Earth. This is similar to action by human hands, which automatically act and reach the part of the human body, where there is any pain or problem.

There is a thought among certain scientific communities that they can regulate varying temperatures of some parts of the Earth & thereby provide relief to it. The Earth can hold hot Volcanos & cold Icebergs simultaneously. We humans with our limited wisdom & cannot become doctors for resolving any problems of the Earth. By experimental indulging in regulation of Earth's affairs, we are doing more harm than good to the Nature.

If there is a prolonged internal/ external heat in a specific region of the Earth, as per nature's rule, Clouds will definitely shower Rains. But the criteria or timeframe for rainfall to happen cannot be set by Humans. Clouds know where, when, how & to what extent they should shower rains, in order to take care of necessary situations. To overcome local ecological emergency situations, affecting local habitat of plants & animals (including humans), temporary solutions like fire extinguishers can be used as a last resort, but not as a regular practice. Permanent flood of waters is not a solution for a fire of smaller extent & duration, which can be extinguished just by pouring one Pot of water. Even pouring of one Pot of Water to extinguish Fire, must be done in a transparent manner. Making everything a top secret creates more doubts. A temperature, which is normal for plants & animals (including humans) of specific lifestyle, may be presumed high or low by those from other type of lifestyle. For example, Polar bears are comfortable in severe colds, whereas Camels are comfortable in severe hot conditions. Installation of heaters to help Polar beer or air conditioners to help Camels is definitely an unwanted burden.

Creating Water canals/ ducts/ sanctuaries by diverting waters flowing/ stored in their natural conditions is just playing with Nature, unnecessarily. Only solution to all problems, we Humans consider as problems, is to adapt ourselves with the existing natural conditions. Changing the Nature to suit our comforts, is the root cause of all the problems.
