This paper is corrective continuation of previous paper “Division of Age of The Earth” submitted on 06 09-2025.

At the time of death of a Celestial body, its Outer body is dispersed & dissolved in the Plasma of Magnetic field. But, a follicle of containing Its seeds is produced from its nucleus. This is similar to Follicle of seeds produced by Calotropis Gigantea (Aak) plant. This rule also applies for our Earth. The follicle of Seeds produced at the end of previous life of the Earth opens up & its Seeds, in the form of Comets travels in different directions. These Comets do travel in search of sustainable source of Magnetic plasma. Once this Search is complete, from that time onwards a Comet establishes itself in that realm. This period, in case of our Earth, from the time it originated from its Follicle & travelled in form of a Comet is 494.171141 earthly tropical solar years. This time is preceding period to its Dawn. Means it is in addition to 9,612,372,000 years of total life span. This time onwards, the period of Sprouting, spanning to 7,412,567.115259 years (1446 divine days) (when the Earth established itself in our Solar system) starts. Sum of these two periods is 7,413,061.2864 years (0.0007712 th part of total life span of the Earth). This above statement is validated from below calculation: On multiplication of orbital period of Alfa Centauri, that is 79.762 years with 48000 years (Sayana Ayanamsha period) & then dividing it with figure of 3,801,600 years (billion th part of life span of Rudra River), a value of 1.00709595 is generated. $79.762 \times 48000 / 3801600 = 1.00709595$ When we take this seed value of the difference (70959.59) & divide it by seed value of life cycle of Rudra River (0.38016) & then divide by Equation of State (1.01), we get a value of 184809. $70959.59 / 0.38016 / 1.01 = 184809$ which is same as core value of our Solar system (184800) with difference of 9. This value of 9 is indicative of the higher cycle of the universe, beyond Rudra River, which is already mentioned in above referred paper. This validates that DNA of Alfa Centauri & our Suns is same. Both of them as comets, have a common root of origin (from same Follicle of seeds, created at the time of death of their common ancestor).
