

Analysing the scalability and Replicability of Project Digital Sakhi of Churu District

Saksham Goel

This paper attempts to analyse the replicability of Project Digital Sakhi of Churu district at the National Level. This includes an estimation of costs, logistics and state-wise analyses of needs, costs and benefits. The paper shall begin with a quick background of the Project followed by the assumptions made in the paper. Then the paper deals with the method and cost distribution of scaling up the project, including convergence schemes, self-funding mechanisms and cross-subsidisation.

I. Background of the Project

The project began in the aftermath of COVID-19 crisis which saw the Women-constituted SHG rising up to the challenge. It was during this period that the need for the digital literacy of women SHGs was felt. PMGDISHA was taken as the ideational inspiration and Project Digital Sakhi was launched in Churu in 2021.

The basic idea of the project was based on the following facts:

- a. The ICT labs in the government schools were under-utilised due to their usage being limited to only school hours. Additionally, the computers were underutilised during the school hours for fear of damage as well as due to actual damage.
- b. The digital illiteracy was a constraining factor in the functioning of SHG members, their access to information and governmental schemes and their ability to use government applications.
- c. Providing digital literacy to SHG members has multiplier effect through familial spread of ICT skills and positive externality of women empowerment.

Thus, based on these facts, following interventions were made:

- a. The ICT labs were utilised in post-school hours for Adult Digital literacy camps, in which locally crafted basic ICT curriculum was taught by a pool of voluntary teachers sourced from volunteering teachers, Yuva Sambal interns and Digital Sakhis themselves.
- b. A dedicated portal was created to monitor the infrastructure, volunteers, beneficiaries in a disaggregated fashion, besides providing various e-resources. The registration of SHG women and the volunteers was done through a easy registration form on the portal which helped customise to the locational and time needs of the SHG women. Beneficiaries could download the e-certification after the completion of the course through OTP. Thus, the certification also served as an authentication mechanism for digital literacy.
- c. The repair of computers was made the norm so as to combat the twin challenge of underutilisation due to fear of damage and actual damage to the computers.
- d. A refresher course was provided to consolidate the progress made by the Project.
- e. For the illiterate SHG women, volunteering students was enlisted to teach. The concept of "Each one Teach One" was used for maximum impact and focussed teaching.

The Project impacted two core groups of beneficiaries:

- a. 34,000 SHG women attained digital literacy, 10,000 started making digital payments, 4,500 were provided ATMs. They started paying bills online, getting e-Shram cards, getting Udyam Aadhar Cards, getting basic information online like food recipes and nearby locations, sharing documents, accessing government apps, and some even started doubling up as Bank Sakhis. The access to computers to rural areas increased by a staggering 250%.

b. The schools had their ICT resources optimally and efficiently used by post-school hours usage. The repairment of computers ensured the fuller utilisation of computers during school hours. The osmosis of ICT skills within families began and the PTMs in schools started to get regular.

Assumptions made in the paper

The paper makes the following assumptions:

- a. The government schools and government-aided schools with a functioning ICT lab can be utilised post-school hours for Digital Literacy Camps.
- b. On an average, the number of computers in each lab is in the range of 10-20
- c. On an average, a school has 180 working days.
- d. On an average, an additional ICT lab costs Rs. 3,00,000/- to build in an existing school.
- e. On an average, it costs Rs. 20,000/- to provide an ICT lab with broadband connectivity.
- f. The repairment costs of computers can be borne by the schools with functioning ICT labs.
- g. In the first phase, 30% of the women in SHGs under NRLM will be covered. From experience from Project Digital Sakhi, it was realised that if around 20% of the members attain digital literacy, 50-60% of the rest attain it through them in an informal fashion. After the first phase, given the establishment of the infrastructure required, the training of the rest can be done at near zero marginal cost in the next 2-3 years.
- h. The fund of the said project would be national, thereby facilitating cross-subsidising regions.

Analysing The Replicability And Scalability Of The Project At The National Level

Sources of data (refer the Table at the end of the paper)

- a. The state-wise data of number of SHGs under NRLM and number of members from NRLM¹ data base.
- b. The state-wise data of number of government schools and government-aided schools, those with ICT labs and those with functioning ICT labs for pedagogical uses from UDISE+ 2021-22 Statistics (Ministry of Education)².

Proposed methodology of scaling up at National Level

- a. Digital Infrastructure:
 - i. The existing functional ICT labs (for pedagogical purposes) in government and government-aided schools will be utilised post school hours
 - ii. The existing non-functional ICT labs (for pedagogical purposes) in government and government-aided schools will be repaired and utilised post school hours.
 - iii. Additional ICT labs will be provided in areas where required.
- b. Dedicated Unified National Portal
 - i. For targeting approx.. 30% of members of each SHG under NRLM and coordinating their time and locational needs through a simple registration form.
 - ii. For monitoring and coordination of the project at state, district, block and village level and
 - iii. For providing e-resources for helping local authorities tweak the standard template of curriculum according to local needs and requirements.

Funding mechanism (refer Annexure 1 for the relevant data):

In terms of digital infrastructure, the states can be divided into three categories:

- a. 17 States and UTs in which the existing computer labs and sufficient or almost sufficient to serve at least 30% of the total SHG members in those states: Rajasthan, Haryana, Himachal Pradesh, Jammu and Kashmir,

¹ <https://nrlm.gov.in/shgOuterReports.do?methodName=showShgreport>, Accessed 16.07.2023

² Government of India (Department of School Education and Literacy, Ministry of Education), "Report on Unified District Information System for Education Plus (UDISE+) 2021-22 Flash Statistic", pp. 185-186

Punjab, Arunachal Pradesh, Manipur, Mizoram, Sikkim, Andaman and Nicobar Islands, Goa, Ladakh, Lakshadweep, Dadra Nagar Haveli and Daman and Diu and Uttarakhand.

b. 17 States and UTs which need substantial funding to create the minimally required infrastructure: Nagaland, Gujarat, Tamil Nadu, Tripura, Kerala, Meghalaya, Maharashtra, Chhattisgarh, Assam, Jharkhand, Odisha, Telangana, Madhya Pradesh, Uttar Pradesh, West Bengal, Andhra Pradesh and Bihar.

Assuming that the existing and repaired ICT labs are utilised, the costs required in the second category are:

$$\text{Cost of new ICT internet per SHG beneficiary}^3 = \frac{(0.3 * m_{SHG}) - (n_{BPS} * n_{ICT}) * \text{cost}_{ICT+BB}}{n_{BPS} * 0.3 * m_{SHG}}$$

| States | Additional no. of ICT labs required to target incremental 30% per SHG | cost of Addl labs and internet connectivity (in lakhs) | Cost of new digital infra per SHG beneficiary |
|----------------|---|--|---|
| NAGALAND | 70 | 223 | 620 |
| GUJARAT | 130 | 416 | 52 |
| TAMIL NADU | 224 | 716 | 66 |
| TRIPURA | 271 | 869 | 692 |
| KERALA | 278 | 890 | 84 |
| MEGHALAYA | 334 | 1069 | 834 |
| MAHARASHTRA | 444 | 1422 | 80 |
| CHHATTISGARH | 2885 | 9232 | 1110 |
| ASSAM | 3106 | 9940 | 880 |
| JHARKHAND | 4129 | 13212 | 1379 |
| ODISHA | 4532 | 14503 | 887 |
| TELANGANA | 5131 | 16418 | 1168 |
| MADHYA PRADESH | 8171 | 26148 | 1679 |
| UTTAR PRADESH | 9901 | 31684 | 1420 |
| WEST BENGAL | 10696 | 34227 | 1039 |
| ANDHRA PRADESH | 13898 | 44475 | 1660 |
| BIHAR | 19450 | 62240 | 1700 |
| Total | 83656 | 267698 | |

Thus, the amount varies from 52 to 1700 and the total amount required is close to Rs. 2677 crores.

There can be multiple ways of funding the Project:

- a. The entire amount of Rs. 2676.98 crore can be funded by the government through a dedicated fund.
- b. This funding can be sources from the following:
 - i. From the beneficiaries: At a national level, the number of beneficiaries shall be approximately, 2.7 crores over 83.5 lakh SHGs. A straight Rs. 500/- fees for each SHG per year takes care of 16% of the total requirement per year. Over 3 years, i.e. the tenure of the saturation, 50% of the amount can be sourced from the beneficiaries at a minimal cost. Additionally, this subscription ensures attendance of beneficiaries and continuation of saturation by creating stakeholders.
 - ii. The remaining amount can be matched from a pool of sources i.e. education department, NRLM, PMGDISHA, and so on, apart from a state government's dedicated fund for the project. Over the coming next years, even this amount can be recovered from the fees

The Project converges digital literacy movement in schools with women empowerment through a cost-effective and simple intervention which ends up creating new digital infrastructure with externalities spread over schools, SHGs, community and economy. Given this, the project is scalable and replicable at National level.

³ m_{SHG} : number of members in SHGs in the state

n_{BPS} : number of beneficiaries per school i.e. 180

n_{ICT} : number of ICT labs in government and government-aided schools in the state

cost_{ICT+BB} : cost of installing a computer lab and internet connectivity i.e. 3,20,000/-

Analysing the scalability and Replicability of Project Digital Sakhi of Churu District

| S. No | State/ UT | SHG under NRLM | Number of SHG Women | Number of Government-aided schools with upper primary, secondary and higher secondary sections | ICT Labs | Functioning ICT labs | Number of women trainable by existing ICT labs | Number of women who can be trained by repairing the non-functioning labs | Number of women who can be trained by existing and repairing labs | % of SHG members trained by existing and functioning labs | Additional number of ICT labs required to target the ideal increment of 30% in every SHG | cost of additional labs and internet connectivity (in lakhs) | Cost of new digital infra per SHG beneficiary |
