Our Earth, the Sun, the Moon & Planets, mainly- Mercury, Venus, Mars, Jupiter, Saturn, Uranus, Neptune & Ceres, along with Rahu & Ketu are most important representatives of the God for us. Along with them two Directions- North & South and 12 Zodiacs are representing the God at broader perspective. Positions of all of above & direction of their movements;

- At the time of Fertilisation (pairing of Parental RNAs)
- At the time of our Birth (Separation of Person from body of Mother)
- At current time

decides our past, present & future behaviour. Combined behaviours of all the beings on the earth actually decide real fate of every Person at any given point of time.

But the question is how does it happen or how do we receive signals from the above representatives of the God. There are four important factors.

Gravitation- All the Celestial bodies of Solar system have their respective gravitational impact, based on their mass & distance. Hence, they are different from each other on the basis of quantum of their impact on us.

Neutrinos- Though the Sun is the main source of Neutrinos for us. Other than that, we receive Neutrinos from various Constellations in varying quantity. Different Zodiacs & Nakshatras supply different quantity of Neutrinos, hence they are different in their Nature.

Magnetic Field- Magnetic impact of the Earth itself is different at different geological positions. Our geological presence at the time of RNA pairing or Birth differentiates us from each other, significantly.

Every Parental RNA, shaping a person's life is different from others.

Below table shows Gravitational impact of various Celestial bodies (in comparison to that of Eris) on us. From this table is noted that impact of various Celestial bodies can be classified in to 7 levels;

- Earth
- Sun
- Moon
- Jupiter
- Saturn & Venus
- Mercury, Mars, Uranus & Neptune
- Ceres, Pluto & Eris

Celestial Body	Mass (Kg)	Distance from Earth (KM)		
		Nearest	Farthest	Average
Earth	5.97217E+24	1	1	1
Sun	1.98848E+30	147098450	152097597	149598023
Moon	7.34600E+22	362600	405400	384399
Jupiter	1.89813E+27	628880977	928077023	778479000
Saturn	5.68317E+26	1283931977	1583128023	1433530000

Venus	4.86731E+24	41388023	257808023	149598023
Mercury	3.30110E+23	91689023	207507023	149598023
Mars	6.41710E+23	78341343	377537389	227939366
Uranus	8.68099E+25	2721373977	3020570023	2870972000
Neptune	1.02409E+26	4350401977	4649598023	4500000000
Ceres	9.38392E+20	264401977	563598023	414000000
Pluto	1.30250E+22	5756781977	6055978023	5906380000
Eris	1.64660E+22	9977031977	10276228023	10126630000
Celestial Body	Body's Gravitation Ratio Farthest to Nearest	Body's Gravitation Ratio on Earth (Vs Eris)		
		Nearest	Farthest	Average
Earth	1.00	3.72E+22	3.72E+22	3.72E+22
Sun	1.07	5.72E+11	5.35E+11	5.53E+11
Moon	1.25	3479662301	2783717815	3096194245
Jupiter	2.18	29890258	13724564	19506205
Saturn	1.52	2147081	1412213	1722340
Venus	38.80	17696257	456077	1354500
Mercury	5.12	244549	47746	91865
Mars	23.22	651176	28039	76920
Uranus	1.23	73002	59256	65592
Neptune	1.14	33699	29502	31496
Ceres	4.54	84	18	34
Pluto	1.11	2	2	2
Eris	1.06	1	1	1

Data Source: Wikipedia.org

Out of these bodies Venus shows maximum variation in its gravitational impact on us from its nearest position to farthest position from the Earth. A difference of almost 39 times. This is why average impact of Saturn is more than that of Venus. It is followed by Mars (23 times). Mars at its nearest point has greater impact than that of Mercury. But at its farthest point its impact is less than that of Uranus or even Neptune.

It is important to study existing gravitational impact of each of above Celestial body at the time of creation of a Person (Fertilisation of Egg) & Birth, so as to ascertain actual strength of given celestial body. We cannot consider impact of Venus to be same when it is at nearest or farthest position from the Earth. Same is the case for Mars or other Celestial bodies.

Gravitational impact of the Earth can be ignored, as it is almost same from every location. But Magnetic field impact of the Earth is very important criteria for differentiation between traits of Persons of one location to other location. Position of Rahu & Ketu also impacts us through variation in presence of Magnetic plasma in the nearer sky at corresponding location.

Constellations present in our 7th, 8th, 9th, 10th, 11th, 12th & 1st house are pushing comparatively more of neutrinos over us. Since 10th house is positioned at the Mid-heaven, it creates maximum impact on our personality.

We have impact of Planets at the time of Fertilisation of Egg, as well at the time of birth. Now the question arises that which one to consider. Clarification for that is that time of Fertilisation of egg decides our fate from the time of Fertilisation till time of Birth. Whereas Time of birth decides our fate from the Time of Birth until time of Death.

Finally there is a question on how do we receive these Celestial signals.

Clarification for that is; our DNA not only decide our fate throughout our life, but also it acts as antenna for receiving Celestial signals in the form of gravitation, Neutrinos & Magnetic field. Our internal ears through their semicircular canals & Cochlea send signal to our brain through Medulla oblongata & thereby help our brain to consolidate signals received through neurons from DNAs present in every Cell. The receiving of information's & their processing in the brain is done by our subconscious mind. This means that our Conscious mind has got little impact over our fate.

The way Solar activity periodicities have impact on life times of various planets (as explained in 1st chapter), Position of Celestial objects have their impact on our lifetimes.
